

**READY TO USE**

## **SPECIAL APPLICATIONS & PLANT MATS**

### ***Plant mats: making difficult situations easy***

An instant green and beautiful result: only one of the features of the ready to use plant mat. But the Covergreen® plant mat has more benefits!

#### **Inclines**

##### ***Rinsing of soil***

Plant mats are really suitable for inclines and other slopes. The incline will be covered at once, which will provide the soil from rinsing (soil erosion). The plant mats roots will bring structure to the soil immediately. Water won't drain, but will be absorbed and delivered in phases to the plants and the soil on the incline.

##### ***Maintenance friendly***

Maintenance on a slope is difficult. Our maintenance friendly plant mat will reduce the needed maintenance significant. With a simple embedding slopes up to 50° are possible!

Hedera helix 'Woerner', Vinca minor, Waldsteinia Ternata, and in really dry circumstances the Sedum plant mat, offer a beautiful solution.

#### **Tree base**

##### ***Healthy tree by open tree base***

An open, green tree base benefits the tree. Hardenings close off the tree base and deteriorate the trees health.

##### ***Fully green covered tree base***

Plants underneath a tree develop less well and compete with the tree for rain water, nutrition and day light. But not our ready to use ground covers. Our plant mats have been pre-grown in greenhouses and are fully grown. They create a maintenance friendly and covered tree base, directly after installing. Which is easy: the plant mats can be put down on the soil, instead of being installed between roots!
